Join the largest community of Photoshop users online. Whether you are a beginner or an advanced user, Photoshop CC is your Photoshop toolkit. Create beautiful images, graphics, paintings, and 3D artwork on your desktop or iPad. Comprised of 16 files, the Acid Flames photomontage is a collection of areas with burning, crackling, and flaring effects. The use of the adobe photoshop techniques by the artist (2D, 3D, typography, image distortion) produce a strong and eye-catching image. Creative Options Each file in the acid flames photomontage has creative options. You can read these options by clicking on the small artboard icons to the right of the main artboard. The following icons are available in the creative options panel: Split: This creates two or more artboards within a file, and allows you to work on each individually. You can add text, and reposition each artboard independently. Colors: These are a selection of color palettes, which you can use to change the color of an image. You can also use the image data itself as a color palette. Curves: This allows you to change the overall tone of the entire image, or the tone of different parts of the image. Textures: This allows you to change the look of the text and shapes of your image by creating a new texture. Effects: These include paint effects, blur, and emboss. Convert to black and white: This converts the image to black and white, and gives you the option of changing the colors, or leaving them as they are. If the image is converted to black and white, you can then use the channels in the panel to change the white and black points of the image. Rotate: This rotates the image clockwise, or anticlockwise. Resize: This will resize the image, and allows you to choose the new dimensions. Align: This allows you to manually set the alignment of your image, or set a new baseline. Custom Position: This lets you manually set the position of the image. You can then position this in any way you wish. Edit Layer: This allows you to work on the different layers of the image separately. Toon effect: This will change the image into cartoon style. You can change the cartoon style, using the types 82157476af
